FROM THE PRESIDENT'S DESK

Fall is in the air. Children are going back to school. Halloween will soon be here. And with Thanksgiving, we need to give thanks for the many blessings that are bestowed upon us.

We are very fortunate that we live in a country that values our elders. And while I gripe about Medicaid not paying its fair share and the fact that we have to charge the private pay residents more because of this fact, we as a society spend a lot of money on keeping our elders safe

and as healthy as possible. So I would encourage us all that at the end of a long day of dealing with the many administrative challenges, that we remember to be kind and supportive of one another.

Best
Regards,
Ron Ross,
President

From Your Community

September is here and there will soon be a little coolness to the air. All I can say about cold weather is I hope it goes by as fast as summer did.

Up Coming Events this fall:

Friday October 9th Community Coffee 10am
Monday October 19th Birthday Bingo 2pm with Churches participating
Saturday October 31st from 4-6pm we will also be serving hot dogs and chips on Hal-

loween again this year. Come and trick or treat at Bertrand Nursing Home.

Wednesday November 11th 10am VET-ERAN'S BRUNCH

"HONORING ALL WHO SERVED"

Friday November 13th Community Coffee 10am

Monday November 16th Birthday Bingo 2pm with Churches participating

Have you ever considered volunteering? If you, a family member or a friend would be

interested in spending some time chatting, helping with group activities or the bigger outings. Please come and see us! Volunteers are much valued and appreciated by all at Bertrand Nursing Home & Assisted Living.

Tips for Halloween and Dementia Residents

By Roz Phillips

Autumn will soon be here and with autumn comes Halloween. Halloween is one of those holidays that can be challenging and preparation and thought should go into this holiday.

Some concerns during this holiday are scary costumes, extra visits, candy concerns, Halloween decorations and Halloween sounds.

If still at home and you feel the constant ringing of the doorbell is too much, just turn your lights off to discourage people from coming to your home. Or if you still want to participate in the festivities, place a bowl of candy at the door with a note "Please take one".

Most facilities have extra guests, children from the community coming in costume and staff dressed for Halloween. Some residents will enjoy the events and others may shy away. Here are a few tips to consider for Halloween.

1. Be realistic about your expectations for Halloween and individual stress.
2. Discuss your plans with the individual; just don't go into a lot of detail.
3. Be prepared to alter your plans. Go at a time when it is not as crowded.
4. Avoid candles, use non-flame candles or lights.
5. Put pumpkins and mums up on tables to avoid tripping.

6. If you find the individual picking at decorations, remove or take them down.

7. Limit decorations. They may cause confusion and agitation.

8. Try non-scary decorations like pumpkins and fall leaves vs. ghosts, goblins and witches.

9. Consider not using scary sounds but instead try Halloween songs.

10. Avoid floor mats that make scary sounds, decorations that are voice activated.

11. Avoid using tapes and CDs with creaking doors, ghost screaming and other scary sounds.

12. Limit sugar intake, offer fruit.

13. If the individual is not over whelmed encourage them to hand out the candy but supervise them to avoid elopement or other risky behaviors.

14. Create new memories by baking a pumpkin pie, decorating sugar cookies, painting a pumpkin with children or others.

Alzheimer's - a Cure in Sight?

By Tory Moghadam

Agusta Deter was the first person to be diagnosed with Alzheimer's disease almost 114 years ago. In the time since, we have had little improvement in treating it. Alzheimer's affects more than 40 million people worldwide. If we live to the age of 80, our chances of getting it are roughly 50%. Samuel Cohen spoke at a recent TED talk about his team's research.

"Today, of the top ten causes of death worldwide, Alzheimer's is the only one we can't prevent, cure, or even slow down." Samuel goes on to give more staggering facts about the lack of funding for this disease, and makes a brave claim: "...we can cure it." Today we believe that Alzheimer's disease is caused by proteins that are improperly folded. Stephen gives the analogy of a piece of paper with sticky goo on the back, while the front of the paper has none. This paper is then folded into a piece of origami. He states later that in Alzheimer's patients, both sides become sticky and the protein is then not folded properly causing big clumps and plaques.

Stephen Cohen's team then set out to try to fix this problem. With their diverse group of scientists, they have managed to find a new class of drugs focused on

one of the steps in protein process. On stage Stephen demonstrated a video of worms in three groups.

Group A were healthy, Group B had improper protein clumps like in Alzheimer's, and Group C had improper protein clumps but had been treated with their team's drug. Group 2 showed little promise as to be expected. The worms were shriveled and looked like they had pieces missing. Group A and C, however, both seemed to be teeming with life.

Samuel concluded his talk by talking about the victims and families of Alzheimer's and saying this "Help speak up for them... ..demand a cure! "
